Abstract

A short summary of the report (no more than 100 words). The abstract should include a concise overview of the context of the report (what the report is about and what it describes), of the results obtained from the peer assessment (Project 2 Part 2), and of the key insights gained from the assessment.

1 Introduction

A short introduction section, which briefly introduces the report and its sections.

2 Algorithm for Generating Natural Language Explanations

A section describing the algorithm implemented for generating natural language explanations of an action starting from an execution trace (as per Section 3.1). The description should explain how the algorithm works and it should include and refer to the pseudocode of the algorithm, which should be written using the Latex algorithm environment. The pseudocode of the main body of the algorithm should be included directly inline as part of the section. If additional algorithms (e.g., sub-functions, etc.) are used and are necessary to be explained in order to fully understand the main algorithm, these should also be included in the report in appendix A (which does not count on the total number of pages). The use of appendix, however, should be minimized, and unnecessarily excessive use of appendix will be graded negatively.

3 Experiments

A section describing the experiment conducted with peer students (as per Section 3.2) to evaluate the output of the algorithm. The report should describe the data that was given to the other students, a description of the questions that were asked to peers to evaluate the algorithm (including a motivation for the questions in terms of which human criteria of good explanations they refer to), and a reflection on the results obtained. The results should include: the number of peer feedback obtained, both a table and a likert plot

reporting the answers of the feedback to the likert questions, and a discussion of the results and the feedback in reference to the algorithm developed.

4 Conclusion

A short conclusion section that wraps up the document and summarizes what has been presented and the main insights.

Acknowledgments

To Robert, for the bagels and explaining CMYK and color spaces.
